RFRE
RF REMOTE EXTENSION

ADDING AND CONTROLLING THE RF REMOTE EXTENSION

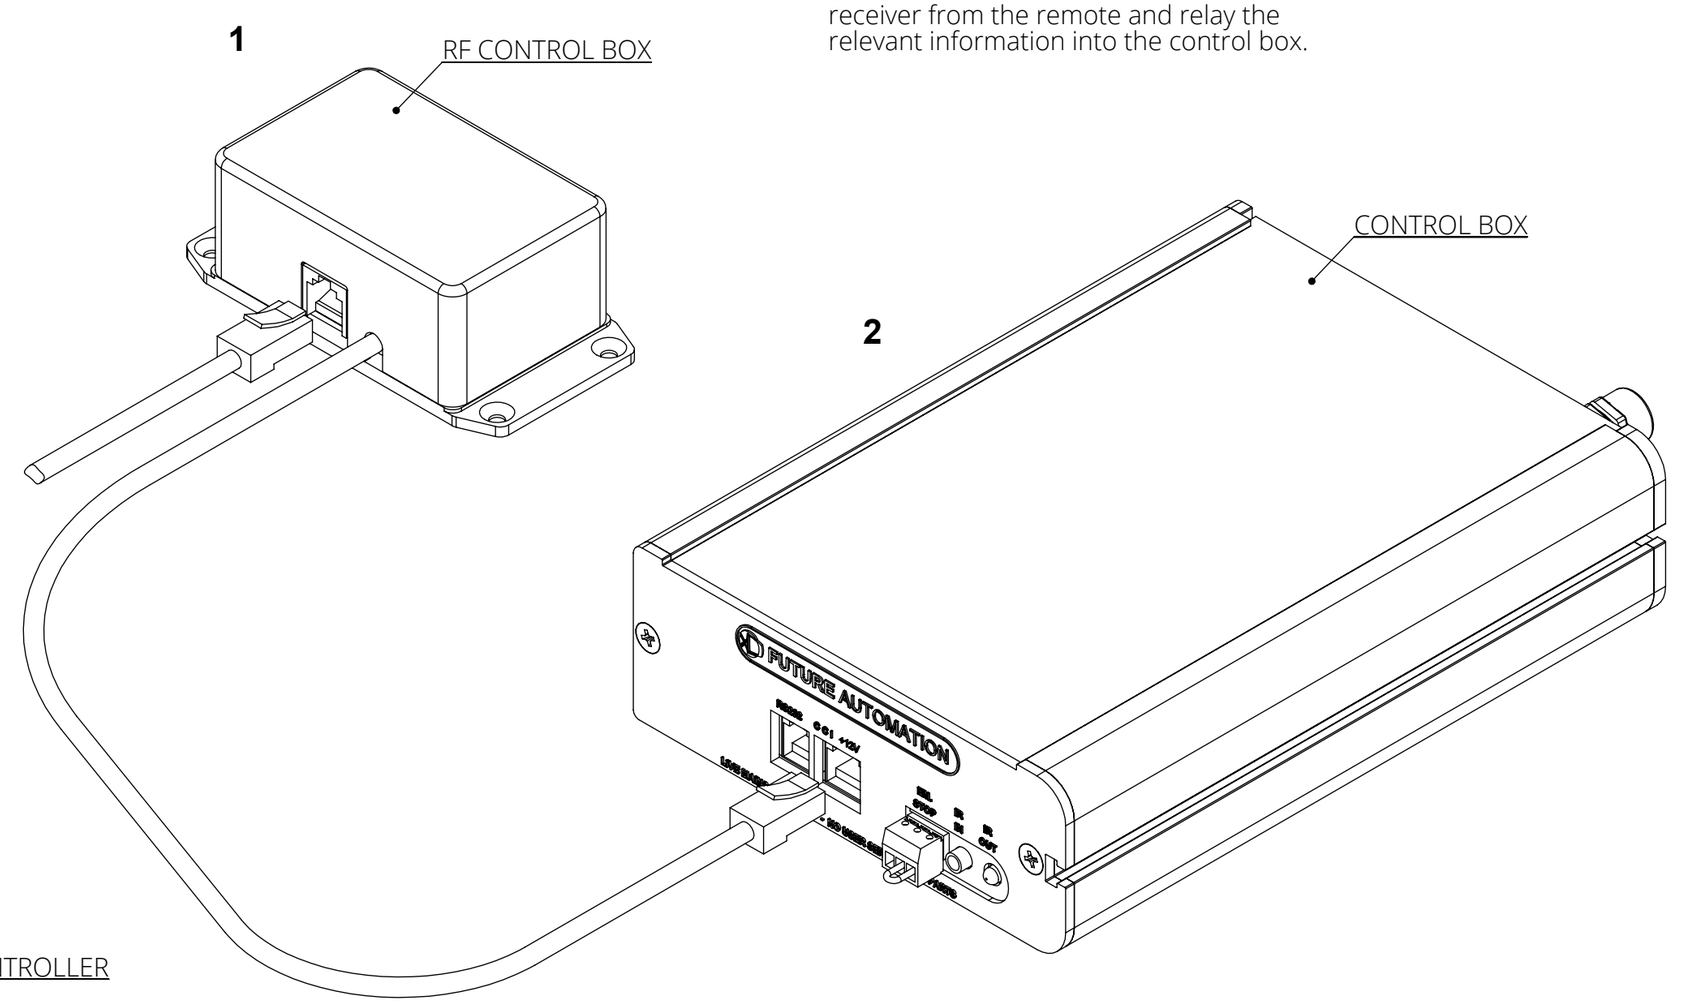

Keys on RF controller work in sync with mechanism's contact closure. Refers to mechanism contact closure in the mechanism instructions.

Red LED flashes on controller to indicate when buttons are activated. If no light comes on when buttons are pressed it may be that the battery is faulty or empty.

1 - Use the extension port on the RF control box for any additional contact closure inputs to the control box.

2 - The RF control box will now act as the receiver from the remote and relay the relevant information into the control box.
